

## MEMO

**Date:** February 7, 2025

**To:** Fire Department Members, Municipal/LSD Representatives, First Responders and Emergency Services Personnel

**From:** Robert Fowler, Fire Commissioner/Director of Fire Services  
Jamie Kennedy, Director of Emergency Services

**Re:** Fire and Emergency Services Training School  
Gander, May 24-30, 2025

---

The Fire Services and Emergency Services Divisions are pleased to announce the dates and location for the 2025 Fire and Emergency Services Training School. The Training School will be held in Gander from May 24-May 30, 2025.

Courses offered through the Training School will provide a wide range of programs, seminars, and practical training in an effort to augment local emergency management and response efforts. This should be of interest to fire, municipal/local service district representatives, police, and other first responders.

**Important:** Please see the attached information regarding the delivery of the **NFPA 1001, Firefighter I** Training Program as the program was recently updated. Also, information on the new **Emergency Traffic Management for Firefighter** course.

Participants may register for as many courses as they wish. The application form can be filled out for either Fire Services or Emergency Services courses. *A separate form must be completed for each course*, specifically indicating if NFPA certification testing is also requested. There is a minimum number of participants established with a registration deadline of **May 9, 2025**, at which point courses may be cancelled due to low registration.

**Please Note:** To ensure quality program delivery, a *maximum* number of participants for each course has also been established. Applications will be accepted on a first come, first served basis.

**ALL PARTICIPANTS must complete and return the Training School Liability Waiver Form with your application(s).**

There are no course registration fees to attend this training school. However, meals, travel, accommodations, and textbooks (unless otherwise indicated) are the responsibility of the candidate. Firefighters attending must bring Personal Protective Equipment (bunker gear and appropriate ensemble) for themselves and a self-contained breathing apparatus (SCBA), where applicable.

Where SCBA is required for training, all participants must provide proof of fit testing or be fit tested on site.

Some courses require pre-read assignments and/or course manuals. Upon registration, you will be advised of the textbooks required and any pre-read assignments. These manuals can be purchased from the Newfoundland and Labrador Association of Fire Services office and can be reached at: (709) 424-6500.

**Course locations will be posted at the Gander Fire Hall close to the Training School start date.**

Emergency Vehicle Traffic Management for Firefighters	NFPA 1021, Fire Officer – Level I, 2020 Edition										

## **NEW COURSE OFFERING!**

The former Vehicle Traffic Management course has been discontinued and a new **Emergency Vehicle Traffic Management for Firefighters** course has been added. The new course is in the final stages of being approved by OH&S and is anticipated to be available at the 2025 FES Training School. See description below.

This course will be the minimum accepted training for firefighters working on a roadway in this province if they are going to be providing temporary traffic management at an unplanned event/emergency scene.

### **Emergency Vehicle Traffic Management for Firefighters**

This course is an update to the previous Vehicle Traffic Management course and provides the knowledge and skills required to safely work on an emergency scene on the roadway. This course follows the NL Traffic Control Manual (TCM) and is approved by OH&S for traffic control during an unplanned event/emergency scene.

The traffic management course was created to reduce the negative effects of the response to emergency roadway incidents by the motoring public, and to provide an increased level of scene safety to responders (police, paramedics, fire and recovery) by the organized placement of emergency vehicles and traffic control devices at the emergency scene. When responding to an incident scene, a priority for first responders is protecting themselves from the dangers inherent to working in traffic. This course offers guidelines responders can use to enhance their safety by:

- Establishing a Traffic Incident Management Area (TIMA) – Utilize all available equipment to set up emergency traffic control and provide positive guidance to the driver as to what is happening and where to drive.
- Avoiding the errant or distracted driver – Do not turn your back to traffic. Face traffic and always remain alert; utilize another person as a lookout or spotter to watch for dangers and provide warnings. Always have an escape plan to get out of the way of errant drivers.
- Using protective equipment – Being seen by motorists is extremely important when working in and near traffic, especially during nighttime and inclement weather. Always wear appropriate high-visibility safety apparel (i.e. vest, jackets, pants, etc.).
- Learning the proper techniques of manual traffic direction at an unplanned event/emergency scene.

Training Log Sheets  
*(Latest update September 2024)*

## Exterior Firefighting I & II/Firefighter I Training Program

### Purpose and FAQ's

#### PURPOSE

The purpose of the new Exterior Firefighting I & II is to give fire departments direction when working through their in-house Firefighter I program (formerly known as Operation 2020). The main reasons for separating Firefighter I into 3 blocks are:

1. Gives departments a starting point with recruit firefighters to introduce them to emergency scenes through a tactful approach to their in-house training programs.
2. Gives a direction on in-house training programs to those departments who are currently only able to offer exterior firefighting due to limited resources. It also allows them the ability to grow to full interior operations should those resources become available.
3. Exterior Firefighting I and Exterior Firefighting II is a replacement for the aging and out-of-date Defensive Firefighting and 2-Day SCBA programs. Exterior Firefighting I and Exterior Firefighting II will now give you credit towards completing Firefighter I which could not be achieved through the old programs (Exterior Firefighting I + Exterior Firefighting II = Firefighter I - Module I).

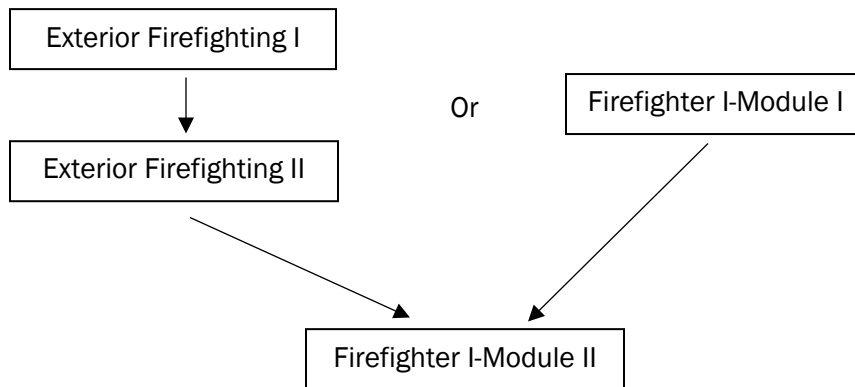

#### FAQ's

- **When will changes come into effect?**
  - Changes to the programs and the elimination of the 2-Day Defensive Firefighting and SCBA programs will take effect **June 1, 2024**.
- **What training should an instructor have prior to teaching these programs in-house?**
  - An instructor shall be trained to the level in which they are teaching, and it is recommended that they have a minimum of the 2-day Fire and Emergency Services Instructor (FESI) course.
  - For the Exterior Firefighting I & II portion of the training the instructor must have previously completed one of the following:
    - Defensive Firefighting and 2-Day SCBA
    - Exterior Firefighting II
    - Firefighter I

- For Firefighter I - Module II the instructor shall be trained to Firefighter I (certification is not required).
- Instructors who do not meet one of these requirements may be granted special approval by Fire Services Division (FSD) depending on their background and experience.
- It still remains the FSD policy that any instructor who teaches these courses regionally and to departments outside of their own must have at least the 2-day Fire and Emergency Services Instructor (FESI) course.
- **When should I submit the log sheets to Fire Services Division (FSD)?**
  - Log sheets should be maintained and submitted to FSD after the completion of each section/block (i.e., Exterior Firefighting I, Exterior Firefighting II and Firefighter I - Module II).
- **Can I teach Exterior Firefighting I and/or Exterior Firefighting II on a weekend?**
  - Both courses are listed as 3.5 days each. This is based on 7-hour days and a class of 20 students. It may be possible to have a smaller class size and cover the material on a Friday evening and a little longer day on Saturday and Sunday. It is important that the information be covered correctly to give students the best training possible.
- **Who can I reach out to for support?**
  - Our Fire Protection Officers would be happy to assist you through the process and answer any questions that you may have.
- **Where do I find the training material?**
  - Training material can be accessed through IFSTA, ResourceOne. Our staff can assist you with the process of setting up an account and providing you with access to the training material.
- **Are there videos that show the proper technique to complete the skills?**
  - Yes, you can download the IFSTA Essentials 7 App for free and every skill has a short 2- to 3-minute video on how to complete them properly.
- **Will the old Operation 2020 - Firefighter I, 7<sup>th</sup> Edition training logs still be accepted?**
  - Yes, both training logs will be accepted. They have the same course material.

- **How is Exterior Firefighting getting me to my Firefighter I goal?**
  - Either Exterior Firefighting I & II or Firefighter I-Module I are prerequisites for Firefighter I-Module II (see flow chart below).

- **After completing Firefighter I - Module II, what do I need to qualify for certification testing?**
  - Standard First Aid & CPR and certification to NFPA 1072, Hazardous Materials - Operations Level: Chapter 5 Core Competencie, Chapter 6.2 Personal Protective Equipment, Chapter 6.6 Product Control or certification prior to September 1, 2019, to NFPA 472, Hazardous Materials – Operational Level are prerequisites for NFPA 1001 Firefighter I certification.

## Seminar and Program Descriptions

### **Air Brake Endorsement**

In accordance with the requirements of Motor Registration - Digital Government and Service NL, to operate any vehicle that is equipped with air brakes you will need an air brake (09) endorsement on your driver's license. This 1-Day Air Brake or 09 Endorsement Course teaches participants how the air brake system works, its many components, how to operate the air brake system and to identify defects in the system. At the end of the course, the attendee will be given the opportunity to write the air brake test. Upon successful completion, you will receive an air brake (09) endorsement. *Candidates enrolling in this course must have a valid Newfoundland and Labrador Driver's License.*

### **Basic Emergency Management**

The intent of the Basic Emergency Management Course is to introduce the basic concepts of emergency management common to all Municipalities/Local Service Districts, as well as provinces and territories across Canada. It is designed for officials from all levels of government, emergency management coordinators and/or planners, emergency responders, volunteers, private sector representatives etc., to be better prepared to fulfill their emergency roles. The course material will enable emergency management personnel to implement processes for mitigating, preparing for, responding to and recovering from emergencies and disasters.

### **Basic Fire Inspection**

This two-day course is designed to give the Fire Inspector an understanding of the importance of an ongoing fire and life safety inspection program. The Fire Inspector will learn how to reference such codes as NFPA 101, Life Safety Code, the National Fire Code of Canada, and the National Building Code of Canada. This Fire Inspection course will cover the fire and life safety requirements in occupancies such as lounges, community halls, bed and breakfasts, schools, hotels/motels, health care facilities and commercial buildings. The candidate will learn how to complete fire and life safety inspection forms, capacity calculations, and home oxygen inspections. This course will also cover the *Fire Protection Services Act and Regulations*, and Services-NL, Engineering and Inspection Division, Plan and Review process, for new construction or renovations.

### **Conducting Live Fire Training**

This course is designed to create a safe instructional environment during fire suppression and non-suppression training involving live fires for acquired structures, fixed Class A structural fire training buildings, as well as other courses involving live fire. It consists of steps to follow in setting up approved drills, preparing the site and running the evolution. This course will give participants the knowledge necessary to conduct live fire and smoke drills involving live fire in accordance with current standards.

### **WorkplaceNL Power Line Hazards (PLH) Certification Training**

This course has been designed by Workplace NL to provide participants with basic knowledge about electricity, electrical hazards, and safety measures when working in proximity to power lines.

***Recertification is required every three years from the date of initial certification.***

## Seminar and Program Descriptions

### Electrical Safety for Firefighters

The overall objectives of this 4-hr. course are to provide an understanding of how an electrical system works, what electrical hazards firefighters face and how to deal with these hazards. Recognize the scope of the firefighters' duties is broader than just fighting fires. i.e. Emergency Responder e.g. car accidents, rescue, spill response, etc. Some of the Do's and Don'ts of firefighting around electrical systems and structural fire. Electricity is abstract and this seminar will focus on the "properties" of electricity, especially those important to the safety of firefighters.

### Fire and Emergency Services Instructor (FESI) (2-Day): Become a Recognized Instructor/Trainer for Your Department

This is a must for firefighters who take on the training role in their fire department. Course participants will learn techniques required to deliver a course from a prepared lesson plan, cover safety considerations in the field and understand the use of training aids and methods of establishing a positive learning environment. Participants will also explore important record keeping techniques and how to organize and track your in-house training program. The course will teach presentation skills using the Essentials of Fire Fighting, 7th Edition, program material that is currently being used to run an in-house Firefighter I program.

### Marine Firefighting for Land-Based Firefighters

The Land-Based Marine Firefighting program is intended to provide municipal fire departments with the knowledge and skills necessary to initiate defensive fire suppression activities on smaller fishing vessels (65 feet or less) and pleasure crafts. The course is designed to be delivered in a 14–16-hour period (two days). Based on practical activities, the course will be limited to 24 firefighters.

Location: Musgrave Harbour

### WorkplaceNL - Safe Lifting and Handling

Facilitators: Shauna Smith and Cheryl Osborne (Kinesiologist), Health and Safety Advisors, WorkplaceNL

Description: This will be an interactive session on safe manual handling practices and movement techniques to prevent back and shoulder injury. We will explore some of the common tasks performed by firefighters.

Session length: Approximately 45-60 minutes

### Emergency, Fire and Falls Prevention Train the Trainer

FES is working with the Division of Seniors and Aging, Department of Seniors, Wellness and Social Development to deliver a fire safety program. To facilitate this FES will be providing training to those interested in becoming presenters. The aim of this program is to assist older adults (primarily seniors) to help make their homes safer. Topics included in the program include:

- Fire safety in the home – how to prevent fire and how to respond to a fire;
- Emergency preparedness – how to prepare for an emergency event and what to do in an emergency event; and,
- Slip and fall prevention.

## Seminar and Program Descriptions

### **Emergency Operations Centre Management (EOCM)**

This course is designed for those who may be required to function effectively as members of an Emergency Operations Centre (EOC). The course introduces the candidate to the principles of emergency operations and control. Candidates receive an introduction to the standard operating procedures applied in an EOC. The focus of the course will be establishing, organizing, and exercising an EOC. This is a two-day course that consists of lectures and tabletop exercises.

Pre-requisite:

- Basic Emergency Management

### **Scribing in Emergency Management**

This course is designed to inform participants about the integral roles and responsibilities that a scribe would fulfill if appointed to this role within an Emergency Operations Center or as part of an Incident Management Team. Course participants will be taught scribing methodologies and best practices followed by competency-based training to apply their skills in scribing exercises.

Upon completion of this course, successful candidates will be able to:

- Understand the integral role that scribes play in emergency management.
- Demonstrate scribing methods and best practices.
- Assume the role of a scribe and contribute to an organization's emergency response efforts.

Pre-requisite:

- ICS 100 or Basic Emergency Management

### **Firefighter Hygiene & Decontamination (Cancer Prevention)**

For all fire department personnel. Research has shown that firefighting activities are directly linked to known human carcinogens. The statistics regarding cancer and firefighting are alarming. This course will explain the extent of the problem and identify various forms of contamination that impact firefighter health. You will learn best practices for reducing exposure, personal hygiene recommendations, proper cleaning techniques for tools, apparatus and decontaminating structural firefighting personal protective equipment (PPE). Additionally, the course includes information on how to document your personal exposure throughout your time as a firefighter. What you learn from this course will directly benefit you. Additionally, sharing this knowledge with your fire department can significantly improve overall health and safety practices. The training material is available to all.

***A representative from WorkplaceNL will be in attendance to provide information and answer any questions that you may have.***

### **Incident Command System 200 (ICS 200)**

Incident Command System or ICS is a management system for command, control, and coordination of an emergency response. It provides a means to coordinate the efforts of individual agencies as they work toward the common goal of stabilizing the incident and protecting life, property, and the environment. ICS uses principals that are proven to improve efficiency and effectiveness in emergency response. ICS 200 builds upon lessons learned in ICS 100 and provides introduction to leadership and management, delegation of authority and management by objectives, functional areas and positions, briefings, organizational flexibility, and transfer of command.

Prerequisite:

- ICS 100\*

\*ICS 100 is a self-study course that can be obtained by contacting the Emergency Services Division.

## Seminar and Program Descriptions

### Respiratory Protection Program

If you are required to wear respiratory protection in your Fire Department then this one-day seminar is necessary. You will learn the Occupational Health and Safety Regulations and requirements for a Respiratory Protection Program and acceptable best practices. Topics presented will include types of respirators, requirements for fit testing, SCBA inspection and maintenance requirements, air cylinder maintenance and air tracking, required air sample testing, required maintenance of air compressors, acceptable fill stations and filling techniques. Sample documentation will be provided with ‘How To’ instructions on having a proper respiratory protection program in your fire hall.

### Emergency Vehicle Traffic Management for Firefighters

This course is an update to the previous Vehicle Traffic Management course and provides the knowledge and skills required to safely work on an emergency scene on the roadway. This course follows the NL Traffic Control Manual (TCM) and is approved by OH&S for traffic control during an unplanned event/emergency scene.

The traffic management course was created to reduce the negative effects of the response to emergency roadway incidents by the motoring public, and to provide an increased level of scene safety to responders (police, paramedics, fire and recovery) by the organized placement of emergency vehicles and traffic control devices at the emergency scene. When responding to an incident scene, a priority for first responders is protecting themselves from the dangers inherent to working in traffic. This course offers guidelines responders can use to enhance their safety by:

- Establishing a Traffic Incident Management Area (TIMA) – Utilize all available equipment to set up emergency traffic control and provide positive guidance to the driver as to what is happening and where to drive.
- Avoiding the errant or distracted driver – Do not turn your back to traffic. Face traffic and always remain alert; utilize another person as a lookout or spotter to watch for dangers and provide warnings. Always have an escape plan to get out of the way of errant drivers.
- Using protective equipment – Being seen by motorists is extremely important when working in and near traffic, especially during nighttime and inclement weather. Always wear appropriate high-visibility safety apparel (i.e. vest, jackets, pants, etc.).
- Learning the proper techniques of manual traffic direction at an unplanned event/emergency scene.

### Fire Operations in the Wildland/Urban Interface

The S-215, Fire Operations in the Wildland/Urban Interface, course requires 24 hours to complete. This course is designed to assist any emergency responders who will be planning for and making operational decisions during an interface incident. At the successful completion of this course, students will be able to: Operate safely and effectively in a wildland/urban interface incident by using situation awareness, performing structure triage, using pre-planning tools, having a basic understanding of fire behavior, and using strategy and tactics unique to the wildland/urban interface environment.

### P-25 Radio Operation

This information session will review the operation of the APX2000 portable radio and lead users through proper use of the features and functions of the radio. It will provide maximum opportunity for firefighters to use the radio and become familiar with safe and efficient operation of it, with the guidance of experienced instructors. This is not a certificate course but rather one component of our overall training plan. Attendees will be provided a link to be able to repeat or review this course content in a virtual environment. Firefighters attending this course should familiarize themselves with the APX2000 at their local department prior to attending and review the user exercises that were in the handout which was presented at their face-to-face training session in 2024.

## Seminar and Program Descriptions

### **NFPA 1001, 2019 Edition, Firefighter I – Module I (Exterior Firefighting)**

This 7-day course follows the NFPA 1001, Standard for Fire Fighter Professional Qualifications. It uses the IFSTA Essentials, 7th Edition textbook. This is an entry-level course for new firefighters. Module I consists of a combination of classroom study and skill preparation that prepares the student to continue into the practical scenarios and modular practical experiences that will follow in NFPA 1001, Firefighter I, Module II.

**Pre-reads consists of chapters 1-3 of the IFSTA Essentials, 7th Edition textbook.**

**\*\*See insert for more information.\*\***

Required Material: IFSTA, Essentials of Firefighting, 7<sup>th</sup> Edition

### **NFPA 1001, 2019 Edition, Firefighter I – Module II**

This course follows the NFPA 1001: Standard for Fire Fighter Professional Qualifications. It uses the IFSTA Essentials, 7th Edition textbook. This entry-level course for new firefighters follows the NFPA 1001, 2019 Edition, Standard for Fire Fighter Professional Qualifications. This course consists of a combination of classroom study, scenarios and modular practical experiences that will prepare the firefighter to carry out most fire ground functions under the direct supervision of an officer or experienced firefighter. The scenarios are designed to train the student in realistic fire ground operations.

Prerequisite:

- NFPA 1001, Firefighter I - Module I.

Required Material: IFSTA, Essentials of Firefighting, 7<sup>th</sup> Edition

### **NFPA 1001, 2019 Edition. Firefighter Level II**

This course follows the NFPA 1001 standard for fire fighter professional qualifications. It uses the IFSTA Essentials 7<sup>th</sup> edition textbook. This course is for a firefighter who is ready to take on extra responsibilities in the fire department. The student will learn assuming and transferring command, acting as the company officer when leading a team in fire attack, pre-incident planning, fire prevention, fire department record keeping, foam use, fire suppression and alarm systems, and other important topics. This course is taught over a five-day period by the Fire Services Division. Approximately 38 hours depending on student comprehension of practical skills. NOTE: Extrication skills from Chapter 17 are not covered in this course. Refer to the certification section for Firefighter Level II. Prerequisites for this training program are certification to Firefighter I, signed medical waiver form and current standard First Aid/CPR.

Required Material: IFSTA, Essentials of Firefighting, 7<sup>th</sup> Edition

### **NFPA 1002, 2017 Edition, Fire Apparatus Driver/Operator - Driver Training,**

This course is broken into three modules for the Fire Apparatus Driver/Operator as follows.

- Driver Training Module will provide firefighters with the many elements of safe fire apparatus operations. The driver/operator will be provided with proper techniques for starting and driving the vehicle, driving in adverse conditions, and using the warning and traffic control devices. The driver/operator will also be given an understanding of the common causes of collisions and how they may be avoided. The driver/operator will also perform practical driving exercises required to meet NFPA 1002, 2017 Edition, Fire Apparatus Driver/Operator Professional Qualifications.

## Seminar and Program Descriptions

Module Length: 16 hours, which may be in person or a blended learning of in person and online.

Required Material: IFSTA Pumping Apparatus Driver/Operator Handbook, 3rd Edition Textbook

Note: Firefighters wishing to take this course must have valid air brake (09) endorsement on their driver's license.

- Pump Operations Module is designed for fire service personnel to develop skills in the operations of fire pumps. Firefighters will learn the operating principles of centrifugal and positive displacement pumps, mid-ship, cross mounted and power take off drive and pumping operations such as drafting (static source), pumping from a hydrant (pressure source), relay pumping (pressure source) and water shuttle operations. Basic friction loss calculations to determine minimum pump pressures will also be involved.

Module Length: 16 hours, which may be in person or a blended learning of in person and online.

Required Material: IFSTA Pumping Apparatus Driver/Operator Handbook, 3rd Edition Textbook

Note: Firefighters wishing to take this course must have valid air brake (09) endorsement on their driver's license.

- Hydraulic Calculations Module will give firefighters the knowledge to identify those things that aid or hinder the movement of water in hose lines, calculate friction loss using the various methods of calculation and calculate correct pump discharge pressure, gallons per minute (liters per minute), friction loss and nozzle pressure, using both written formula and estimation methods.

Module Length: 8 hours, which may be in person or a blended learning of in person and online.

Required Material: IFSTA Pumping Apparatus Driver/Operator Handbook, 3<sup>rd</sup> Edition Textbook

\*\* Candidates who successfully complete all three (3) modules and meet prerequisite requirements may be eligible to apply for certification at NFPA 1002, 2017 Edition, Standard on Fire Apparatus Driver/Operator Professional Qualifications. \*\*

### **NFPA 1006, 2021 Edition, Technical Rescuer – Common Passenger Vehicle Rescue – Awareness, Operations & Technician Levels, (4-Day Program)**

This course provides rescue personnel with techniques, skills and equipment available for the safe and effective extrication of victims trapped in common passenger vehicles. The course includes Awareness, Operations and Technician Level Rescuers common passenger vehicle techniques. The course addresses the rescue skills appropriate to passenger vehicles and non-high-risk environments. Students learn how to establish scene safety zones, stabilize vehicles, isolate potentially harmful energy sources, and help to remove and transport a victim to a safe area. This course emphasizes the inherently dangerous aspects of technical rescue and the rigorous activities, which must be performed in adverse conditions.

Course Length: 32 Hours in person learning

Required Material: Jones and Bartlett, Vehicle Rescue and Extrication Principles and Practice. Revised Second Edition.

**\*\*NOTE: This is a new textbook for this course\*\***

Candidates who successfully complete this course and meet prerequisite requirements may be eligible to apply for certification at NFPA 1006, 2021 Edition, Standard for Technical Rescuer Professional Qualifications, Chapter 8, Vehicle Rescue Awareness, Operations and Technician Levels

## Seminar and Program Descriptions

### NFPA 1021, 2020 Edition, Fire Officer I

This course is designed to prepare fire officers or aspiring fire officers to become leaders in the fire service while fulfilling the requirements for Fire Officer I as described in the current edition of NFPA 1021. The course will cover such topics as; human resource management; community/public relations; fire department organizations and administration, including budgets, reports, and planning; fire inspection, investigation, and public education; emergency service delivery; and safety. The course is not a fire ground operations or fire control course.

Course Length: 40 hours, which may be in person or a blended learning of in person and online.

Required Material: Fire and Emergency Services Company Officer 6th Edition Textbook

Candidates who successfully complete this course and meet prerequisite requirements may be eligible to apply for certification at NFPA 1021, 2020 Edition, Standard for Fire Officer Professional Qualifications, Level I

***NOTE: Fire Services Division plans to offer Fire Officer I and II on a rotating basis at training school moving forward with FOI being offered in 2025 and FOII being offered in 2026. If attended, it will rotate back and forth in the future.***

### NFPA 1031, 2014 Edition, Fire Inspector – Level I

The fire inspection and code enforcement, Fire Inspector I, course is designed for those individuals who are actively engaged in fire and life safety inspections. The course meets the requirements of NFPA 1031, 2014 Edition, Standard for Professional Qualifications for Fire Inspector and Plan Examiner, Fire Inspector I.

This course will cover such areas as; duties and authority; standards, codes, and permits; construction types and occupancy classifications; means of egress; water supply distribution systems; water-based fire-suppression systems; special-agent fire-extinguishing systems and extinguishers; fire detection and alarm systems; fire hazard recognition; site access; storing, handling, dispensing of hazardous materials; plan review and field verification, and inspection procedures.

Candidates eligible to apply for certification testing and are participating in an in-person class setting, will be required to complete testing for assigned job performance requirements (JPR'S) in an individual setting and other JPR's assigned in an assignment-based format.

Note: When this course is offered online or through blended learning, the format for completion of certification testing may change. More information will be provided when the program is offered in online or blended learning format.

Course Length: 40 hours, which may be in-person, online or blended learning.

Required Material:

IFSTA Fire Inspection and Code Enforcement, 8<sup>th</sup> Edition

IFSTA Fire Inspection and Code Enforcement, 8<sup>th</sup> Edition Student Workbook

NFPA 101, Life Safety Code, or NFPA 101, Life Safety Code Handbook, 2021 edition (Handbook is Recommended)

NFPA 25, Standard for the Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems, 2023 edition.

Candidates who successfully complete the course material or meet equivalent requirements of training, may be eligible to apply for certification testing to NFPA 1031, 2014 Edition, Standard for Fire Inspector Professional Qualifications, Fire Inspector I.

## Seminar and Program Descriptions

### **NFPA 1035, 2015 Edition, Fire and Life Safety Educator – Level I (2-day)**

Students will gain knowledge and skills to deliver sound public education to their communities. Students will learn about human behavior during fire emergencies, teaching techniques, and strategies to effectively reach a variety of audiences. Methods of delivering fire and life safety education, selecting educational materials, working with the media and evaluating programs will be covered.

Required Material: IFSTA Fire and Life Safety Educator, 6<sup>th</sup> Edition

### **NFPA 1041, 2019 Edition, Fire and Emergency Services Instructor – Level I (5-Day)**

This course is designed to provide the skills and teaching techniques required for those who will be instructing fire and/or emergency services courses. The course will meet the requirements of NFPA 1041, 2020 Edition, Fire Services Instructor; Level I. Candidates, have successfully completed 40 hours of teaching, practical evaluations and passes a written exam, will receive Certification. The text required for the course is IFSTA, Fire and Emergency Services Instructor, 9th Edition.

## Seminar and Program Descriptions

### Certification Testing

#### NFPA 1001, 2019 Edition - Standard for Firefighter Professional Qualifications - Firefighter I and Firefighter II Certification Testing

As you are aware, the certification testing has been separated from the NFPA Firefighter I and Firefighter II training programs. In order for a firefighter to be certified, he or she must be tested at one of the scheduled testing sessions. To be eligible for testing, the firefighter must have completed the NFPA course offered by this office or have completed an approved equivalency program.

**Note:** In order to write the Firefighter I certification exam, firefighters must be certified to NFPA 472/1072, Hazardous Materials – Operations Level Chapter 5 Core Competencies Chapter 6.2 Personal Protective Equipment Chapter 6.6 Product Control. For Firefighter II certification, the candidate must be certified to NFPA 1001, Firefighter I and have completed a Vehicle Extrication course.

#### NFPA 1002, 2017 Edition - Standard on Fire Apparatus Driver/Operator Professional Qualifications – Pumper Level Certification Testing

To complete testing the firefighter must complete the three Fire Apparatus Driver/Operator Modules; Pump Operations, Hydraulics, and Driver/Operator before presenting themselves for certification testing.

- Firefighter must have a valid driver's license with air brake endorsement.
- Written Exam has 50 Multiple Choice Questions covering all three modules.
  - A 70% pass mark will be required to successfully pass the course.
- Practical Test (Skill Test): A random selection of five JPR's shall be selected for each certification testing session.
  - Each JPR must be completed successfully to receive a pass

#### NFPA 1006, 2021 Edition - Standard for Technical Rescuer Professional Qualifications – Common Passenger Vehicle Rescue Awareness Level Certification Testing

To complete testing, the candidate must complete an NFPA 1006, Technical Rescuer – Vehicle Rescue Awareness Level course or equivalent, have successfully completed Emergency Medical Responder 40 Hour course or Advanced First Aid for Firefighters as provided by St. John Ambulance or Red Cross.

- Written Test: 25 Multiple Choice Questions.
  - A 70% pass mark will be required to successfully pass the course.
- Practical Test (Skill Test): A random selection of ten JPR's shall be selected for each certification testing session.
  - Each JPR must be completed successfully to receive a pass

#### NFPA 1006, 2021 Edition - Standard for Technical Rescuer Professional Qualifications – Common Passenger Vehicle Rescue Operations Level Certification Testing

To complete testing, the candidate must complete an NFPA 1006, Technical Rescuer – Vehicle Rescue Awareness and Operations Level course or equivalent, have successfully completed Emergency Medical Responder 40 Hour course or Advanced First Aid for Firefighters as provided by St. John Ambulance or Red Cross.

- Written Test: 25 Multiple Choice Questions.
  - A 70% pass mark will be required to successfully pass the course.
- Practical Test (Skill Test): A random selection of JPR's shall be selected for each certification testing session.
  - Each JPR must be completed successfully to receive a pass

## Seminar and Program Descriptions

### Certification Testing (cont'd)

#### **NFPA 1006, 2021 Edition - Standard for Technical Rescuer Professional Qualifications – Common Passenger Vehicle Rescue Technician Level Certification Testing**

To complete testing, the candidate must complete an NFPA 1006, Technical Rescuer – Vehicle Rescue Awareness, Operations and Technician Level course or equivalent, have successfully completed Emergency Medical Responder 40 Hour course or Advanced First

Aid for Firefighters as provided by St. John Ambulance or Red Cross and have Medical Clearance signed by physician or fire chief.

- Written Test: 25 Multiple Choice Questions.
  - A 70% pass mark will be required to successfully pass the course.
- Practical Test (Skill Test): A random selection of JPR's shall be selected for each certification testing session.
  - Each JPR must be completed successfully to receive a pass

#### **NFPA 1021, 2010 Edition – Standard for Fire Officer Professional Qualifications – Fire Officer I Certification Testing**

To complete testing, candidates must be certified in NFPA 1001, Standard for Firefighter Professional Qualifications – Firefighter II and NFPA 1041, Standard for Fire Service Instructor Professional Qualifications – Instructor I and have successful completion of the NFPA 1021, Standard for Fire Officer Course.

- Written Test: 50 Multiple Choice Questions
- A 70% pass mark will be required to achieve certification.
- Practical Test (Skill Test): All Skill Tests must be completed successfully to receive a pass.

#### **NFPA 1031, 2014 Edition - Standard for Professional Qualifications for Fire Inspector and Plan Examiner – Fire Inspector I Certification Testing**

To complete testing and achieve certification, the candidate shall:

- Attend the 40-hour theory and practical classroom sessions
- Complete the written test: 50 Multiple Choice Questions
  - A 70% pass mark will be required to achieve certification
- Complete assignments provided on day one (1) and present to a Proctor at the assigned skill-testing site
- Complete and return the three (3) assigned take-home assignments, within six (6) months of course completion
- Candidates must pass all 22 Job Performance Requirements, to achieve certification
- When the take-home assignments are returned and proctored, the candidate will be informed, via mail, of the results.

#### **NFPA 1035, 2015 Edition – Standard on Fire and Life Safety Educator, Public Information Officer, Youth Fire setter, and Youth Fire setter Program Manager Professional Qualifications – Fire and Life Safety Educator I Certification Testing**

To complete testing and achieve certification, the candidate shall:

- Attend the 16- hour theory and practical classroom sessions.
- Complete the written test: 50 Multiple Choice Questions
  - A 70% pass mark will be required to achieve certification.
- Complete and present to a Proctor a fire prevention presentation as part of a group at the assigned skill-testing site
- Complete and return the eight (8) assigned take-home assignments, within two (2) months of course completion.
- Candidates must pass all eight (8) Job Performance Requirements, to achieve certification.
- When the take-home assignments are returned and proctored, the candidate will be informed, via mail, of the results.

## Seminar and Program Descriptions

### NFPA 1041, 2019 Edition - Standard for Fire Service Instructor Professional Qualifications, Instructor I (5-Day) Certification Testing

To complete testing, candidates must have successful completion of the NFPA 1041, Standard for Fire Service Instructor Professional Qualifications, Instructor I course and have successfully completed:

- Written Exam: 50 Multiple Choice Questions
  - A 70% pass mark will be required to achieve certification.
- Practical Test (Skill Test): All Skill Tests must be completed successfully to receive a pass

# Fire Services Division Training Offer and Registration Package

## HazMat - Awareness and Operations

NFPA 470, Hazardous Materials/Weapons of Mass Destruction (WMD) Standard for Responders, 2022 Edition

### PLEASE POST

Course Location: Clarenville Fire Hall, 7 O'Mahoney Drive

Course Dates: April 12 – 17, 2025

Course Times: 8:30 a.m. - 12:00 p.m.  
1:00 p.m. - 5:00 p.m.

Certification Testing: Awareness, April 14 at 8:30 a.m.  
Operations, April 17 at 8:30 a.m.

### Required Materials – **NEW!!**

IFSTA, Hazardous Materials for First Responders, Sixth Edition

**It is strongly advised that candidates have a copy specifically if going forward for certification.** This book can be purchased by contacting the Newfoundland and Labrador Association of Fire Services' office at (709) 424-6500.

### 2024 Emergency Response Guidebook (ERG)

Please Note: The 2020 version of the Emergency Response Guidebook is acceptable. Please bring your copy if you have some at your fire hall. To obtain copies of the 2024 Emergency Response Guidebook, please visit <https://tc.canada.ca/en/dangerous-goods/canutec/2020-emergency-response-guidebook-paper-copy>

Participants must bring bunker gear and SCBA. Note: SCBA can be shared between your own fire department firefighters **BUT** each person must have their own face piece.

A copy of the skills will be provided at the course.

Suggested Pre-Reads: Chapters 1 to 10 and 13 of IFSTA, Hazardous Materials for First Responders, Sixth Edition

All travel, accommodations and meal costs are the responsibility of the participant.

To attend, the attached application form must be completed and returned to Fire Services Division, Deer Lake via fax: (709) 635-4163 or email: [wendyporter@gov.nl.ca](mailto:wendyporter@gov.nl.ca).

**Deadline for applications is March 21, 2025. Maximum number of participants is 24.**

For additional information, please contact this office at (709) 466-4109.
